

```

class TestFinallyBlock{
    public static void main(String args[]){
        try{
            int number=25/5;
            System.out.println(number);
        }
        catch (NullPointerException e)
        {
            System.out.println(e);
        }
        finally
        {
            System.out.println("The Execution of final block always happen ");
        }
        System.out.println("after final the rest of the code....");
    }
}

```

- Output:

```

5
The Execution of final block always happen
after final the rest of the code....the code...

```
