

```
Class A{

    public void methodA()

    {

        System.out.println("Base class method");

    }}

Class B extends A{

    public void methodB()

    {

        System.out.println("Child class method");

    }

    public static void main(String args[])

    {

        B obj = new B();

        obj.methodA(); //calling super class method

        obj.methodB(); //calling local method

    }

}
```
